CURRICULUM VIATE

Pavan Kumar Gurijala.
H.mo 6-39/1 STREET No. 4, Medipally, Hyderabad
Mobile No. 7780646924
E-mail: pavan@pavan-cloud.in

Microsoft Certified Systems Administrator with a Master Degree in M.sc(IT)with 20+ years of Experience in handling environment of large-scale Windows Servers environment with Intel Based Hardware Support Experience, Effectively plan, install, configure and optimize the IT infrastructure to consistently achieve high availability and performance.

Worked Full time employment with JP Morgan, IBM, Kyndryl, Mindtree, Value labs and Provide support for Clients – State street Bank/ Microsoft Mizuho Bank

20+ years of relevant experience in windows servers/Patch management/Vulnerability management/Azure infra/Active Directory/ MS exchange-O365/Team Management

Educational Qualifications:

- ✓ M.Sc. (information Technology) -Nagarjuna University

Certification

- ✓ ITIL Version3 Foundation (Feb2012)
- ✓ MCSE(December2006)
- ✓ Microsoft Certified Azure Administrator(AZ-104)(2021)
- ✓ Microsoft certified Azure Solution Architect (AZ-305)(2022)
- ✓ Administering windows server Hybrid Core infra (AZ-800)(2024)

TECHNICAL EXPERTISE

Operating Systems : Windows 2k/2k3/2k8/2k12/2k16.
Infrastructure as code : Terraform
Devops Tools : Azure Devops
Version control tools : Azure Repos & GIT
CI/CD : Azure Pipeline
Vulnerability management : Tenable
Patch management : VMware venter protect8.0, Shavlik net check, WSUS,IBM Big Fix,TANIUM,SCCM
Backup Tools : Tivoli Storage manager 6.3
Virtualization : VMware server ESXI, VMware server, VSphere client
Messaging : Exchange2000/2003/2007/2010/) office 365, Symantec E-Vault 8.0, BES 5.0
Monitoring/migrations : Omnicenter7.0 (netreo), SCOM2012, Quest Migration Tool & ADMT/Ops Ramp/Solarwinds/ENOW
Antivirus : McAfee-Endpoint Enterprise Edition
Server Hardware : dell power edge 2950, Power Edge SC430, Power Edge 6400

Professional Experience:

Company	**:**	**Synechron**
Role	**:**	**Lead-Specialist – IT operations**
Project name	**:**	**Mizuho Bank**
Role	**:**	**Specialist -IT operations**
Duration	**:**	from July2023 to Till now

Tools/Technologies

Monitoring	**:**	OpsRamp/ENOW/ExtraHop/Solarwind/Lansweeper/Citrix Director/splunk
Ticketing	**:**	ServiceNOW
Messaging	**:**	O365/Proofpoint/On pre exchange
IP managemt	**:**	BlueCAT
Password management	**:**	Cyber Arc/Lastpass
CI/CD	**:**	Azure Devops
MFA	**:**	Due security

Responsibilities:

Patch Management (SCCM/MECM, Tanium, BigFix)

- Improved **patch success rate by 25%** through automation with SCCM/MECM query-based collections and PowerShell scripts.
- Reduced downtime by coordinating with application owners to schedule patching windows, ensuring **zero production impact** during critical updates.
- Executed large-scale patch deployments across **40,000+ Windows servers and VDI environments**, achieving consistent compliance across enterprise systems.
- Streamlined SCCM environment by performing **client health monitoring and cleanup**, removing inactive/offline machines and reducing reporting discrepancies.
- Enhanced patch cycle efficiency by staging and distributing packages across **all DP servers**, minimizing deployment delays.
- Integrated **Tanium and IBM BigFix** for patch validation and remediation, ensuring faster closure of vulnerabilities flagged by Tenable.
- Conducted **pre-check/post-check validations** with PowerShell and VB scripts, reducing patch rollback incidents by 20%.
- Coordinated patching of **cluster nodes, Exchange servers, and database servers**, ensuring high availability during maintenance cycles.
- Delivered **daily patch compliance and health reports** to stakeholders, improving visibility and accountability across IT operations.
- Authored and updated **SOPs in Confluence**, standardizing patch workflows and reducing onboarding time for new engineers.

Active Directory & Identity Management

- Streamlined **user lifecycle management** (creation, modification, disablement, password resets) to reduce onboarding/offboarding turnaround time by 30%.
- Executed **Quest Migration Tool & ADMT projects**, successfully migrating AD objects across domains/forests with zero downtime.
- Led **AD cleanup and restructuring initiatives**, eliminating stale objects and improving directory compliance and performance.
- Supported **device migration projects** leveraging Quest solutions, ensuring seamless cutover and minimizing business disruption.
- Implemented and troubleshot **Azure AD Connect** synchronization, enabling secure hybrid identity across on-prem and cloud.
- Administered **Microsoft Entra ID (Azure AD)** with conditional access and MFA, strengthening authentication security posture.
- Enforced privileged access controls via **CyberArk**, reducing audit findings and ensuring compliance with security policies.
- Conducted **regular AD health checks** (DNS, replication, SYSVOL, FSMO roles), proactively identifying and resolving issues before impact.
- Optimized **Group Policy Objects (GPOs)** to enforce security baselines and streamline endpoint configuration.
- Automated AD reporting and remediation using **PowerShell scripts**, improving efficiency in access reviews and compliance audits.
- Delivered Tier 2/3 support for escalated AD/device issues, achieving faster resolution times and reducing repeat incidents.
- Coordinated with **Information Security teams** for privileged access audits, ensuring adherence to regulatory standards.
- Maintained **operational documentation, SOPs, and KB articles**, improving knowledge transfer and reducing onboarding time for new engineers.
- Provided **24x7 enterprise AD support**, ensuring high availability and rapid incident response across global environments.
- Restored AD objects using **Active Directory Administrative Center**, minimizing downtime during recovery scenarios.

Infrastructure Support (Windows Servers, Azure, VMware)

- Managed and supported 95,000+ Windows servers across enterprise environments, ensuring high availability and zero unplanned downtime during critical projects.
- Reduced incident resolution time by 30% through advanced troubleshooting using Perfmon, WinDBG, RAMMAP, DISM, and PSTools.
- Designed and implemented Azure infrastructure solutions (VM provisioning, VNET peering, RBAC roles), enabling secure hybrid cloud adoption.
- Migrated workloads from on-prem to Azure and AWS, improving scalability and reducing infrastructure costs.
- Automated server commissioning and deployment using Terraform, Ansible, and IBM 24HSB tools, cutting build time by 40%.
- Administered VMware Horizon VDI environments, resolving profile issues and optimizing performance for 10,000+ users.
- Delivered daily health check reports (AD, SSL, O365 mail flow, vCenter, disk alerts, Citrix backups), improving proactive monitoring and reducing escalations.
- Coordinated patching and remediation across cluster nodes, SQL servers, and Exchange servers, ensuring compliance without service disruption.
- Implemented server hardening policies and conducted ITCS104 security audits, reducing deviations and strengthening compliance posture.
- Led disk expansions and SQL performance tuning, improving application stability and database efficiency.

- Collaborated with DevOps teams to integrate Azure Compute with CI/CD pipelines, enabling automated deployments and faster release cycles.
- Supported M365/O365 environments (shared mailboxes, distribution lists, Proofpoint integration), improving collaboration and secure mail flow.
- Authored and updated SOPs and technical documentation in Confluence, standardizing processes and reducing onboarding time for new engineers.
- Provided Tier-2/3 support for Azure VM performance issues, achieving faster RCA and minimizing downtime during escalations.

M365 support

- Email Flow Monitoring: Perform daily health checks on O365 mail flow, SSL certificates, and Active Directory integration; quickly address delivery failures or delays.
- User Support & Troubleshooting: Resolve issues related to Outlook profiles, connectivity, rules, filters, and permissions; provide end-user assistance for email access and functionality
- Quarantine Management: Monitor quarantined messages, release legitimate emails, and block malicious ones; assist users with accessing quarantined mail.
- User Support & Awareness: Provide end-user support for Proofpoint notifications, quarantined emails, and false positives; educate users on safe email practices.
- Incident Response: Investigate and respond to Proofpoint alerts related to phishing campaigns or compromised accounts; escalate high-risk incidents to security teams.
- **Integration Checks**: Ensure Proofpoint is properly integrated with O365 mail flow and Active Directory; validate SSL certificates and mail routing.
- Organized and maintained shared mailboxes, distribution lists, and group emails for smooth team collaboration.

Reporting & Communication

- Send daily health check reports covering AD, SSL, O365 mail flow, vCenter, disk alerts, Citrix backups.
- Prepare vulnerability status reports from Tenable, highlighting remediation progress and escalations.
- Update SOPs in Confluence when processes change (e.g., new patching workflow, updated remediation steps).
- Communicate remediation timelines clearly with DevOps and application teams.

Vulnerability Management (Tenable & Security Compliance)

- Reduced exposure to critical vulnerabilities by driving **daily Tenable scans** and prioritizing remediation based on CVSS scores and business impact.
- Partnered with IT and Security Operations teams to **close high-risk findings within SLA**, improving compliance posture across mission-critical systems.
- Automated vulnerability reporting with **PowerShell and Tenable dashboards**, cutting manual effort by 40% and accelerating escalation workflows.
- Developed and documented **remediation plans and timelines**, ensuring clear accountability and faster closure of recurring issues.
- Presented detailed vulnerability status reports to senior management, enabling **data-driven risk decisions** and improved audit readiness.
- Coordinated with application and infrastructure teams to validate patch deployments, achieving **zero production downtime** during remediation cycles.
- Strengthened endpoint and server security by integrating **Tenable findings into SCCM/MECM patching workflows**, reducing repeat failures.

- Conducted **root cause analysis** of recurring vulnerabilities, implementing long-term fixes that reduced repeat findings by 25%.
- Ensured compliance with organizational security policies by performing **regular audits of privileged accounts and AD objects** tied to vulnerability risks.

Company : Cloud4C(A CtrlS company)
Role : Principle Engineer
Project name : 100+ customers across the globe
Role : Tech Lead/manager
Tools : myshift/forti client/bigfix/Zabbix monitoring
Duration : from oct2022 to june2023

Responsibilities:

Team management

- Managing 18+ resources using success factor.
- Involved on Campus Hiring
- Managing shifts/Leave tracking/comp offs/on-call support
- Tracking SLA breach tickets/problem tickets/SIP/backlog tickets/CR on daily basis & follow up with shift engineers.
- Presenting of powerBI reports to management for All the tickets on daily basis.
- Responsible for managing Delivery and Operations of portfolio of projects across IT Operations, and Customer Support specializing in customer engagement and business performance in Cloud Ops space. Comes with a pragmatic approach to business growth through delivery excellence with direct accountability on end-to-end service delivery, customer satisfaction and people development.
- Attend DSAT and Governance call on daily basis.
- IT Audit/Controls and IT Security functions
- Conducting KT sessions Across team, preparation of SOP and SOW

Infrastructure support

- Installation, configuration & Administration of Windows server 2012/2016/2019
- Management of Azure infrastructure.
- Building azure infrastructure using Ansible/Terraform
- management of directory infrastructure Includes FSMO roles, trusts, Kerberos KDCs, replication topology,group policies etc.
- Secure remote administration of the DCs and member servers managed by the Infrastructure Group Manage group policy at root of domain and for Domain Controllers OU

- Apply and enforce standard naming conventions for objects in the domain Comply with AD policies and standards as defined on the AD Web Site
- Physical security of the domain controllers in IT Division space and oversite for all domain controllers Backups and restores on domain controllers
- Server hardening methods and process
- Bug fixing and maintenance of the Windows Platforms

Mindtree

A Larsen & Toubro Group Company

Role : Technical specialist
Project Name : Microsoft (Microsoft azure data center support)
Role : Shift Lead
Tools : Git,CodeFlow,Atom,Desh,Azure Repos,Pilot Fish,Power BI,Kusto query Language
Duration : feb2022-oct2022

Responsibilities:

Team Management:

- Managing team of 12 support engineers.
- Task assignment on daily basis.
- Preparation of weekly/Monthly incident reports (TTA,TTE,TTM) by using Microsoft power BI.
- Tracking of missed SLA incidents and identify root cause.
- Preparation of monthly shift roaster and Leave tracking.
- Coordinate daily scrum call with support engineers and dev Team.
- Preparation of MBR report and present to management Team.
- Creattion/updation of TSG(trouble shooting guide) at Microsoft shareponit portal.
- Implementation and Delivery of Microsoft Azure projects.
- Documentation of solutions (e.g. architecture, configuration and setup).
- Assist in transition of projects from on-premise to azure

Infrastructure support

- Managing MS azure deployment infra servers which has incidents, live site issues and service. requests from Development Team.
- perform build out and smoke test.
- Implementing best practices for cloud cost optimization by using vmware CloudHealth tool
- Microsoft Azure pre-production support – Deployment and monitor activities on Deployment infrastructure.
- troubleshoot Windows Azure deployment infrastructure services when goes down/unavailable by using Microsoft Tools(XTS/ATOM)
- Handling Sev2/3 incidents by using ICM(Microsoft incident management tool)
- Troubleshoot AZURE VM boot issues
- Working on CR to perform changes for AZURE build/release piplines
- Managing windows2008/2012/2016/2019 and AD infrastructure
- Administration of DHCP Services, DHCP failover services, DNS

Role: : **Subject Matter Expert-windows**
Project Name : **State Street Bank/IOL**
Environnent : **Windows 2k3/2k8/2k12/2K16**
Servers : **20,000+ windows servers**
Duration : **oct2019-feb2022**
Responsibilities

Infrastructure support

AZURE

- Re-sizing azure VMs and Disk Expansion
- migrating workload to AWS and/or Azure
- Configure VNET's across locations and peering between regions to establish connectivity
- Managing subscriptions/VNETS/resource group/storage account on **AZURE** environment.
- migrating various azure resources across subscriptions/resource groups.
- implementing RBAC roles on Subscription, Resource Group and Resource level
- Migration of on premise VM to MS AZURE cloud
- Build of AZURE VMs using Terraform
- Migrate MS SQL databases to PaaS services
- Implementation and Delivery of Microsoft Azure projects.
- Documentation of solutions (e.g. architecture, configuration and setup).
- Assist in transition of projects from on-premise to azure
-

On premise infra

- Trouble shooting server down issues on HP/DEL/IBM physical servers.
- Managing precheck/post check/compare validations with POWERSHELL/VB scricpt
- Troubleshooting Server crashes, unexpected reboots by analyzing the memory dumps with the help of debugging tools like Windbg.
- Installation of windows security patches on 30,000 windows servers with IBM Bigfix/TANIUM
- Installing windows security patches on cluster nodes, database servers, and web servers.
- Preparing global notification/ **ServiceNow** changes for DEV/UAT/PROD/DR servers
- Planning and preparation of Patch cycle for complete year.
- Configuration of Maintenance window/server disk cleanup/server reboots in TANIUM
- Troubleshoot Tanium agent issues/DOT net patch installation issues.
- Verification of security patches on test environment and coordinate with application team
- Upgrading antivirus/firmware/PowerShell and SCCM client with SCCM2012
- Verification of security patches on test environment and coordinate with application team
- Own, plan, execute, escalate and facilitate various steps of the process as needed to ensure that changes are executed seamlessly and to minimize unpredicted impact from change
- Develop, improve, document, and communicate the change process and policies
- Monitor, troubleshoot and work customer support tickets on SERVICE NOW
- Managing automation tasks using POWERSHELL scricpts
- Attending of CAB meetings of both IBM and clients CAB team

- Expertise in using various debugging tools perfmon, winDBG, poolmon, PS tools, and various windows resource kit tools
- Delegate duties and tasks within the IT department.
- Run and Maintenance/BAU activities based on tickets from Remedy.
- Migration of on premises VMs to Azure
- File and Print server support.
- Involved on security auditing as per ITCS104 standards on windows server environment and prepared the deviation list. Preparation remediation plans for the deviations.
- Health Check remediation for windows servers as per the IBM policy
- Creation of VMs and installing different guest OS like windows and Linux flavors.
- Automation of Server Commissioning and Server Deployment with 24HSB(IBM tools)
- Involved on server Builds and decommissioning.
- Problem determination and documentation of Root Cause Analysis.
- Prepare and maintain documentation of technologies, standards and procedures.
- Verification of security patches on test environment and coordinate with application team.
- Creating and Managing Virtual Machines and Templates.
- Managing application and db servers(pre checks and post checks after performing server security patch activity

Active Directory

- Administration of Domain controllers
- Planning and implementation of Active Directory installation and configuration
- ADC installation and DC –DR replication configuration.
- GPO's creation, link to OU's, Delegation rights to OU's
- AD Connect to migration the in-house AD to AZURE
- AD Management & GPO's creation, link to OU's, AGPM, and Delegation rights to OU's.
- Migration of Domain Controller from Win2k3, Win2k8 to Win 2012 R2

Team Management

- Coach all team members and motivate them to produce desired results
- Achieved zero/minimal downtime with no production impact for various project executions.
- Managing Team of 10 members by providing guidance for day today operations, defining responsibilities.
- Preparing Shift Plan, managing staffing, leaves for the team.
- Through Task assignments, prioritization and workload balancing ensures technical resources have clarity of what they need to execute day to day.
- Manage the leaves/absence of shift engineers, shuffle their schedules without any conflicts, assign the tickets based on the severity, proactively monitor and report any critical need of resources before an escalation is raised by internal/external customers.
- Work with cross functional teams, varied suppliers and business teams to address Delivery challenges.
- Identify and recommend improvements to existing processes, provide recommendations to improve the Server infrastructure and address/lead critical issues and root cause analysis
- Effective and timely communication with partners regarding downtime, project updates, and troubleshooting progress

Role : Associate
Servers : 95,000+ windows servers
Environnent : Windows 2008/2012/2016

Duration : june2017-oct2019

Infrastructure support

- Planning, implements, and maintains the server infrastructure and projects.
- Support and maintain Windows/VMware based servers.
- Server provisioning and OS upgrade and Lifecyle
- Windows\v center server patching and firmware\drivers upgrade
- Troubleshoot application errors, operating system(s), server hardware, network communications and storage
- Creating and modifying existing PowerShell scripts as per the company requirements.
- Monitors daily progress/status and makes adjustments/corrections to ensure optimal performance and service
- Problem determination and resolution within Expected time frame and Escalations handling. Assume personal responsibility for resolving problems in most effective way possible within SLA reaching root cause and preventing problems.
- Installation of windows security patches on 40,000 windows servers with **SCCM2012,**
- Installing windows security patches on cluster nodes, database servers, and web servers.
- Upgrading antivirus/firmware/PowerShell and SCCM client with SCCM2012
- Verification of security patches on test environment and coordinate with application team
- Firmware up-gradation on DELL/HP servers and CISCO UCS
- Provide detailed technical documentation as needed.
- Migration of on premises VMs to Azure
- Managed Virtualization Environment using VM Ware ESX 3.x, VM Ware VSphere 4.x,Virtual Center, VI Client, P2V
- Installation, Configuration, Administration and Troubleshooting of ESX 3.x,Vspere 4.0, Virtual Center, VI Client
- CreatingClusters for High Availability (HA) and Distributive Resource Scheduling (DRS)
- Creating and Managing Virtual Machines and Templates
- Configured Resource Pool, V Motion, Alerts, Alarms, NTP
- Migrate Physical Servers to Virtual Server using VMware Converter (P2V Converter)
- Migrating of Virtual Machines using V Motion
- Managing subscriptions/VNETS/resource group on **AZURE** environment.
- Managing Azure storage accounts, Azure AD.
- migrating various azure resources across subscriptions/resource groups.
- implementing RBAC roles on Subscription, Resource Group and Resource level
- Migration of on premise VM to AZURE
-

Active Directory support

- Maintaining DC backups using Quest backup
- Support restoration of deleted AD objects and auditing
- Active Directory migration from Windows 2003 to 2008 R2 and 2008 R2 to 2012 R2
- Provide support on planning, implementing and managing global migrations
- Suggest up-gradation plans for securing AD environments
- Troubleshoot and provide technical analysis concerning operating system, network, and application performance issues to resolution. Provide root cause analysis when needed.
- Assessment of GPOs & perform cleanup activity accordingly
- **Team Management**
- Managing Team of 12 members by providing guidance for day today operations, defining responsibilities.
- Preparing Shift Plan, managing staffing, leaves for the team.
- Through Task assignments, prioritization and workload balancing ensures technical resources have clarity of what they need to execute day to day.

- Manage the leaves/absence of shift engineers, shuffle their schedules without any conflicts, assign the tickets based on the severity, proactively monitor and report any critical need of resources before an escalation is raised by internal/external customers.

Worked as**Technical services specialist** with **IBM India, Hyderabad**

Project Name : **a) IRVING OIL (HQ-CANADA),**
b) INTERCONTINENTAL HOTEL Group (UK)
c) British Petroleum-BP(UK)

Servers : 50 ESXI Hosts (5.5),300 Virtual machines
Environnent : Windows 2000 and 2k3/2k8/2k12/
Duration : aug2015-june2017

Responsibilities

Involved on New Account transition (IHG,UK) from US data center to INDIA.
Attending different phases of CAB meetings of both IBM and clients CAB team; this includes SRT, Exec, Change board.
Deployment of MS security patches with **IBM Big Fix**, offline WSUS
Verification of security patches on test environment and coordinate with application team
Expertise in using various debugging tools perfmon, winDBG, poolmon, PS tools, and various windows resource kit tools
Delegate duties and tasks within the IT department.
Review completed tasks to ascertain compliance with standards.
Coach all team members and motivate them to produce desired results
Run and Maintenance/BAU activities based on tickets from Remedy.
Migration of on premises VMs to Azure
Managed Virtualization Environment using VM Ware ESX 3.x, VM Ware VSphere 4.x,Virtual Center, VI Client, P2V
Installation, Configuration, Administration and Troubleshooting of ESX 3.x,Vspere 4.0, Virtual Center, VI Client
Creating and Managing Virtual Machines and Templates
Configured Resource Pool, V Motion, Alerts, Alarms, NTP
Migrate Physical Servers to Virtual Server using VMware Converter (P2V Converter)
Migrating of Virtual Machines using V Motion
Creating Templates from VM's, deploy VM's from templates and allocate resources
Creating duplicate Virtual Machine's using cloning technology (hot & cold).
Performing Snapshots, Cloning, Cold Migrations and Hot Migrations
Converting p2v and v2v using VMware standalone converter
Moving VMs from one LUN to other LUN using storage V-motion
Managing of McAfee Epolicy Orchestrator 4.0and ensure the proper updating of Latest DAT on all servers File and Print server support.
Resolving TMS backup issues on windows servers.
Involved on security auditing as per ITCS104 standards on windows server environment and prepared the deviation list. Preparation remediation plans for the deviations.
Health Check remediation for windows servers as per the IBM policy
Creation of VMs and installing different guest OS like windows and Linux flavors.
Automation of Server Commissioning and Server Deployment with 24HSB(IBM tools)

Involved on server Builds and decommissioning.
Problem determination and documentation of Root Cause Analysis.
Prepare and maintain documentation of technologies, standards and procedures.
Troubleshooting Server crashes, unexpected reboots by analyzing the memory dumps with the help of debugging tools like Windbg.

Worked as **Sr.Support specialist AD&Messaging** with **VALUE LABS**, Hi-tech city, Hyderabad

Project Name : CELGENE Corporation (HQ-New Jersey, US)(Pharma company)
Servers : 1500No.s (Located on New Jersey, Sandi ago, Switzerland)
Mail servers : 16 No's
Windows servers: 1800 No's
Environnent : Windows 2000 and 2k3/2k8/2k12/exchange 2007 servers,
Duration : dec2010-aug2015

Responsabilités

1. Helped to insure and maintain the technical environment and systems were compliant with corporate standards.
2. Installation of windows security patches on 2500 windows servers with VMware **vcenter protect8.0/Shavlik net Chk, WSUS** on development/testing/validation/production/DR Servers.
3. Planning and preparation of Patch cycle for complete year.
4. Verification of security patches on test environment and coordinate with application team
5. Managed vendors, consultants, & internal IT team to successfully execute projects on-time, within budget
6. Expanded the use of VMware, achieving 90% virtualization.
7. Implemented new onboarding/offboarding procedures to reduce total time by 50%.
8. Developed and maintained user documentation and help files and KB Articles.
9. Hired and trained local IT team during construction phase, ramping to full operation.
10. Lowering ticket resolution times by 25% and creating a new support structure for staff needs.
11. Troubleshoots and resolves software, hardware, Windows-based operating system.
12. Managing of virus events for 2000 windows servers through McAfee Epolicy Orchestrator 4.0
13. High-end changes like change in cluster, hardware replacement, software/driver Up-gradation on production systems.
14. Schedules, plans, and performs system upgrades, including coordinating the transition from test to production environment.
15. Troubleshooting issues pertaining to User tickets
16. Performs daily routine maintenance, i.e. review Tivoli Storage Manager (TSM) daily activity log, perform TSM database maintenance, perform TSM storage pool maintenance
17. Preparation of TSM server daily health check reports
18. Solve issues with backups and restores
19. Perform customer initiated Restore requests
20. Monitor backup job schedule and performance.
21. Managing of VM backup Backups hosted on ESX servers
22. Migration of **Active Directory** objects using Quest Migration Tool & ADMT production environments.
23. Administration of **McAfee Endpoint enterprise edition**and **Symantec EV server**
24. Installation of security patches on Cluster servers using Shavlik and Vcenter protect.

25. Remote Administration of IBM blade Servers(RSA Console-IMM)
26. Migration of Active Directory objects using Quest Migration Tool & ADMT
27. AD Cleanup and maintain the standard architecture design.
28. Recommend, coordinate, and perform infrastructure improvements, upgrades, and repairs.
29. Installation and Backup configuration knowledge on IBM Tivoli Storage Manager.
30. Responding to problem tickets for issues reported by clients.
31. Follow standard operating procedures while maintaining validated servers and hardware
32. Provide timely status updates to direct manager and IT management
33. Administration of **Exchange server2010** in Multi site environnements.
34. Administration of proof point/Postini (Anti-Spam)

Magna InfotechPvt Ltd.,(http://www.magna.in)

MAGNA INFOTECH

Project : Internal infra support
Duration : october2005 to december2010

Roles & Responsibilities:

- Setup a Disaster Recovery servers for containing business critical data
- Introduced virtualization to the infrastructure including all domain controllers
- **Windows Administration**-Well-versed in Windows 2003 System Administration which includes Operating system Installation, backup, upgrades, monitoring, system performance, network security and troubleshooting.
- **Database Administration (SQL 2000 &2005)**–Installation, configuration, database creation, user level permissions.
- Installation, configuring and maintenance of DNS, FTP and DHCP servers.
- Configuring and managing of users, their policies and profiles.
- **Exchange Server 2003 & 2007**- Installation, configuring and managing of Exchange server (2003 &2007), Designing of mailbox Users, Distribution groups, Creating and managing recipients assigns the user permission, Configuring properties like Delivery Restrictions and Storage Limits.
- Configuring of exchange2007 (client access, hub transport, mailbox access roles).
- Experience in Database Maintenance Plans, jobs, Recovery Models, Backups and Restore.
- **Additional Roles** - Checking Symantec and Microsoft website for new vulnerability information including patches and hot fixes.
- Perform regular maintenance of servers through installation of software upgrades, patches and hardware upgrades.
- Creation of desktop and Laptop images and install new systems using Norton Ghost utility.
- **Process Management** - Playing a responsible role in troubleshooting issues logged by the client users in day-to-day operations of the company and providing complete remote support to the users.
- Handle the tasks of monitoring window servers, corresponding infrastructure and associated applications and take corrective action to restore service.
- Coordinate with vendors, repair and maintain IT assets, manage vendor AMC's.
- Responsible for vendor management as well as supervision for the installation and maintenance (hardware) of servers by junior staff.
- Handling a team size of 7 members.

Worked as freelance Hardware Technician February 1998 to December 2002

Responsibilities:

- Assembling Computers Of Pentium I ,II,III ,Cyrix and 486 Computers
- Installation of VGA cards, AGP Cards, Sound Cards,scanners,inkjetprinters, TV tuner cards, LAN cards
- Strong Knowledge in Computer Hardware and troubleshooting
- Installation Of Windows 3.11, 95 , 98 and Millennium
- Installation and Configuration of Windows 98,2000professional
- Assembling Computers
- Conferring Peer to Peer LAN
- Installation of windows 2000 Professional and XP desktop systems, MS Office, email and browser installations plus troubleshooting and upgrading.
- Managing Symantec Antivirus Personal and Server addition and Updating Security Patches.

Additional qualifications

- "Computer applications" from electronic test and development center from department of electronic department of electronics govt of India(**1996**)

- "UNIX" from advanced training institute for electronics and process instrumentation (**1998**)

- "c" language from university college of engineering (Osmania university) (**1998**)

- Oracle 7.3 with developer 2000 from electronics corporation of India ltd (ECIL)(**1999**)

Personal Profile:

Name	:	G.Pavan Kumar
Father's Name	:	G. Janardhan Rao
Age	:	49 years
Date of Birth	:	9th June 1976
Martial status	:	Married
Languages Known	:	English/Telugu/Hindi
Nationality	:	Indian.
