Organization Background:

The Cloud Engineering and Ops team drives cloud migrations, engineering and OnPrem hosting, compute, storage data protection, data engineering for the Technology, Engineering & Operations organization. We support OnPrem and Azure cloud infra running Windows, Linux VM's and SQL, Oracle databases.

What will you be responsible for?

- End to end Management of SCCM environment including designing, building, and maintaining new/existing SCCM environment.
- Assist in the responsibility for the reviewing vulnerability data from multiple sources (i.e., external / internal penetration testing, internal / external vulnerability scanning, etc.) across multiple technologies and a changing environment including infrastructure and applications to determine risk rating of vulnerabilities to business assets.
- Assist in improving and automating new/existing vulnerability management lifecycle. Including, but not limited to data ingestion and normalization, compliance metrics and detection on assets.
- Able to handle complex technical escalations
- Able to train and mature team members to handle complex issues due to patching
- Learn and Implement next Gen technologies and features
- Error resolutions and RCA for Major Incidents
- Able to present KPIs to stake holders
- Bring Engineering and Automation skillsets

What would your day look like?

- Configuration and Management of SCCM Infra
- Troubleshooting SCCM Infra and Vulnerability issues
- Using SCCM/Azure Update Management for patching Server environment
- Developing toolsets and scripts to automate patching and vulnerability management process
- Explore and architect Cloud patching solutions (AUM, Azure Arc, etc.)
- Root cause Analysis for MIs
- Proficient in Scripting and Automation platforms like PowerShell, Python, Ansible etc.
- Drive multiple projects and stakeholder management, reporting & dashboards

Who are we looking for?

- 9-13 years of experience in managing enterprise patching (server side) and vulnerability management.
- Hands-on experience in latest branch of SCCM
- Understanding of SCCM architecture
- Expertise in Vulnerability manageability process and implementation; preferably using Rapid7
- Hands-on experience in Application deployment, Patch Management, Azure Update Management, Vulnerability Management and OSD.
- Monitor the SCCM Platform for capacity planning and optimization
- Proficiency in one or more technologies - PowerShell, Ansible, etc.
- Extensive and in-depth troubleshooting experience on SCCM Platform and associated topologies.
- Ability to work in ambiguous work environment with global team setup
- Experience working in feature crew model, knowledge of Agile framework
- Ability to learn and adapt to changing landscape
